Application/Control Number: 10/014,502

Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 2, 12, 16-17 and 20-21, drawn to a peptide, a method of detecting the presence of the peptide and a pharmaceutical composition, classified in class 435, subclass 15 and 226.
- II. Claim 3, drawn to an antibody, classified in class 530, subclass 387.9.
- III. Claims 4-6, 8-11, 13 and 22-23, drawn to a nucleic acid, a gene chip comprising the nucleic acid, a vector comprising the nucleic acid, a host cell containing the vector, a method of making a peptide by using the host cell and a method for detecting the presence of a nucleic acid, classified in class 435, subclass 6, 320.1, 252.3, 226 and class 536, subclass 23.2.
- IV. Claim 7, drawn to a transgenic animal, classified in class 800, subclass 8.
- V. Claims 14-15, drawn to a method for identifying a modulator of the peptide, classified in class 435, subclass 4.
- VI. Claim 18, drawn to a method for treating a disease of condition comprising administering a binding agent of the peptide, classified in class 424, numerous subclasses depending upon the identity of the binding agent.
- VII. Claim 19, drawn to a method for identifying a modulator of the expression of the peptide, classified in class 435, subclass 6.

The inventions are distinct, each from the other because:

The products of groups I-IV are chemically different substances and are patentably distinct.

Application/Control Number: 10/014,502

Art Unit: 1652

Inventions I and (V-VII) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as for its enzymatic activity. Also, the methods of groups V-VII are patentably distinct in that they achieve a different outcome and involve different processes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
